Summery

- 1 Introduction
- 2 Domains
- 3 Data
- 4 Data
- 5 Modeling
- 6 Results
- 7 Conclusion and Perspectives

Motivations:

- ◀ Enhance AI¹ knowledge.
- ◀ Automation as way to democratize access to research and AI solutions.
- ◀ CAD² system are promising path towards medical automation.

¹Artificial Intelligence.

²Computer-Aided Diagnosis.

Objectives:

- ▶ Gain expertise in deep learning theory and its real-world applications.
- ▶ Explore and study the optimal approach for utilizing the distribution of dermoscopy images from the dataset during the training process.
- ▶ Propose and train deep learning models using transfer learning on ISIC³ Challenge melanoma images.
- ▶ Create a CAD infrastructure with trained models, a user-friendly web UI⁴, a HTTP API⁵, and Docker support for easy deployment on Linux systems.

³Skin Imaging Collaboration.

⁴User Interface.

⁵Application Programming Interface.

Problem

Detection of Melanoma Skin Cancer

- ◀ Melanoma exhibits a high mortality rate.
- ◀ Dermoscopy procedures are utilized for melanoma detection.
- ◀ Dermoscopy images are examined by professionals to study cutaneous lesions.
- ◀ Several studies have shown that melanoma task classification achieves comparable or superior results to those of novel dermatologists.

Metastasis

Solution

CAD Training and Deployment Pipeline

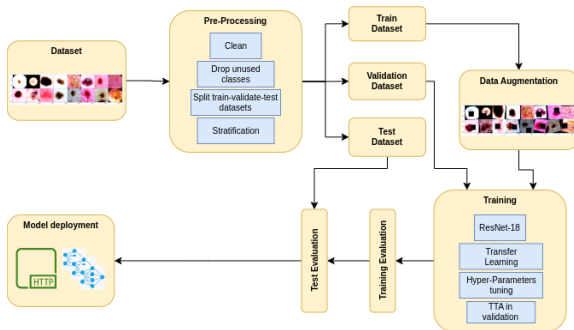

Figure 2: CAD Infrastructure Pipeline.

Micro-Service Architecture to Infer Images

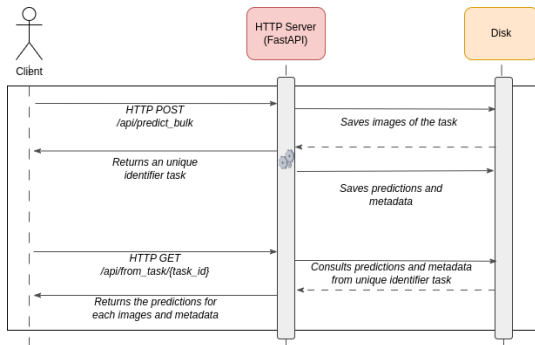

Figure 3: *Inferring Images Through the Background Task Mechanism.*

Ethical Concern:

- ◀ The solution employs "black box" models, lacking explainability.
- ◀ The thesis presents a CAD tool designed to aid human decision-making rather than being an autonomous decision-making system.

Regulatory Framework:

- ◀ When dealing with medical images, obtaining signed consent is necessary for data publication.
- ◀ Recent research collaborations prioritize data sharing through de-identification methods to tackle these challenges.
- ◀ The thesis made use of the ISIC Archive database, which serves as a publicly accessible resource.

The TS fuzzy model can be justified by:

- ◀ Its simplicity
- ◀ Uncertainties
- ◀ Its acceptable accuracy
- ◀

The TS fuzzy model can be justified by:

- ◀ Its simplicity
- ◀ Uncertainties
- ◀ Its acceptable accuracy
- ◀

The system can be modeled as:

$$\begin{cases} {}^C D^\alpha x(t) = f(x(t), x(t - \tau(t)), u(t)), t \geq 0, \\ x(s) = \varphi(s), s \in [-\tau, 0] \end{cases}$$

$x(t) \in \mathbb{R}^n$ the system state

$u(t) \in \mathbb{R}^m$ the control vector

τ : the delay

System behavior without controller

Figure 4: System state

System unstable

System behavior with controller

Figure 5: Control signal

System behavior with controller

Figure 6: System state

The system is stable but it needs more enhancement

System behavior with the proposed controller

Figure 7: Proposed controller signal

System behavior with the proposed controller

Figure 8: System state with the proposed controller

Stability + better performance

Quantification of the comparative study

	Classical controller	Proposed controller	Enhancement rate
Settling time	26	20	23 %
Pic to pic x_3	1.36	1.16	15 %
$\int_0^{ts} (x_3^2) dt$	2.5540	0.7771	70 %
$\int_0^{ts} (u^2) dt$	12.8476	7.1868	40 %

Table 1: Quantification of the comparative study

We remark that

- ◀ **Enhancement of the settling time of 23%**
- ◀ **Reduction of the control energy by 40%**
- ◀ **Overall enhancement by 70%**
- ◀ **Pic to pic reduction by 15%**

We conclude that:

Conclusion

- ◀ **Lyapunov method efficiency.**
- ◀ **Proposed controller leads to better performance.**
- ◀ **Delayed controller enhances the performance.**
- ◀ **Proposed approach allows reduction of the control energy.**

As perspectives we propose:

perspectives

- ◀ Perspective 1.
